

“ UNIFYING THE MANAGEMENT AND
ACCESSIBILITY OF MEDICAL DATA ”

INCREASING PROXIMITY OF HEALTHCARE GIVERS AND
PATIENTS BY CENTRALIZING THE MANAGEMENT AND ACCESSIBILITY
OF PATIENTS' MEDICAL DATA VIA A SECURED WEB-BASED APPLICATION

DataPlus is designed to increase proximity of healthcare givers and patients by centralizing the management and accessibility of patients' medical data in a secured environment. Developed to support multi user and multi site concurrent access, it is equipped with a multi level user access management system that is enhanced with 2 levels of user authentication. The architecture design of DataPlus focuses on the data access security and user friendliness of the application. Engineered to be a modular application, it can be customized to suit the different data collection workflow, system validation and system automation needs of its users. DataPlus is designed to facilitate data quality assurance efforts by allowing its users to run real time data queries and data cleaning activities with its data query management module. Its audit trail and logging system will ensure that the data it manages are kept credible and traceable at every stage of its data management process.

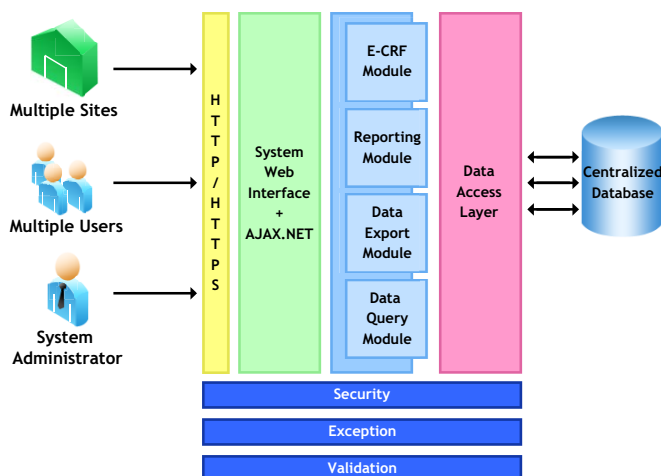

STANDARD MODULES:

- ✓ *E-CRF Module*
- ✓ *Reporting Module*
- ✓ *Data Query Module*
- ✓ *Data Export Module*
- ✓ *Advance User Access Management Module*
- ✓ *Audit Trail and Logging Module*

HIGHLIGHTS:

-  Multi User, Multi Site Concurrent Access
-  Dual Level User Authentication System
-  Multi Level User Access Management System
-  Data Query Management System
-  Centralized Database - to avoid data duplication
-  Secured Web based Access
-  Built in Data Validation Checks
-  Built in Process and Field Entry Automation
